A kitten’s permanent incisors (the 12 teeth in the front of the mouth – 6 on top, 6 on bottom) usually come in at a predictable rate. The following pictures can be used as a guideline for determining the age of kittens between 12 and 24 weeks of age.

Healthy kittens weigh about 1 pound for every month of age. So, a 2 pound kitten is about 2 months old!

Developmental Milestones

- Eyes open
- Crawling
- Baby teeth erupt
- Walking
- Playing
