

These images show what a normal, routine incision should look like during the healing process and will help you check on your male cat's progress. We hope this will be helpful to you and your cat.

You will note the small green tattoo (which indicates that your pet has been sterilized). It should also heal similarly to those seen in the images.

Female Cats

Day 1

Day 5

Day 10

If you think your cat is having an emergency after their spay/neuter surgery, please contact your veterinarian, an urgent care clinic, or an emergency clinic.

If your cat was spayed or neutered with us in the past two weeks, and you'd like to schedule an appointment regarding their surgery, please call us during regular business hours (Tue – Sun, Noon to 6pm) at (503) 925-8903.
